Closed circuit cooling towers

Options and accessories

Plume abatement coil

Finned coils installed in the air discharge of your cooling tower and piped in series with the wet coil offer all this:

- extended dry operation
- reduced or eliminated plume during wet operation
- savings on water and water treatment

BAC has developed special plume visualization software clearly showing **how your cooling equipment will plume** before it is installed – the perfect way to find the optimal plume abatement solution.

Want to reduce plume above your cooling tower or know how your cooling tower will plume?
Contact your local BAC representative for more information.
