Closed circuit cooling towers

Options and accessories

Sound attenuation

HFL cooling towers use **quiet centrifugal fans, but to reduce noise even further, you can** extend your HFL cooling tower with sound attenuators at the air intake and discharge points.

For residential areas:

Sound attenuation (<u>HS type</u>)

- Discharge attenuator with vertical baffles
- Intake attenuator with straight baffles

For rural areas:

Heavy sound attenuation (HD type)

- Discharge attenuator with vertical baffles
- Double intake attenuator with straight baffles

Your local BAC representative can explain any of the above sound attenuator options in more detail a provide you with sound pressure and sound power data.
