Electric water level control package

When you require **more precise water level control**, replace the standard mechanical make-up valve with an electrical water level controller.
An electric water level control package

- reduces water consumption
- helps maintain your system year-round
- increases the equipment reliability

The package consists of

- a basin-mounted float switch
- a solenoid-activated valve in the make-up water line

The valve closes slowly to minimize water hammer.

Want more precise water level control?
