Electric water level control package

Spare parts guide

Electric water level control package

When you require **more precise water level control**, replace the standard mechanical make-up valve with an electrical water level controller.
An electric water level control package

- reduces water consumption
- helps maintain your system year-round: no adjustment needed
- increases the equipment reliability
- is less sensitive to freezing and variations of pressure in the water supply
- adjusts faster the water level
- is suitable for higher water pressures compared to standard mechanical float valve assembly

The package consists of

- a basin-mounted float switch
- a solenoid-activated valve in the make-up water line

The valve closes slowly to minimize water hammer.

Want more precise water level control? Contact your local BAC representative for more information.
